Workshop: Saving Grace: Resurrecting American History

Tuesday, March 24 3:15pm – 5:30pm

Room: Patriot

Description:

Emmy award-winning filmmaker Eric Futterman presents a documentary which describes how state-of-the-art laser imaging and sculpting technologies were employed to replicate the Richmond Theatre Fire Monument at Monumental Church, Richmond, Virginia. The narration follows the process through Virginia, Maryland, North Carolina, and Ireland. Watch how an old sculpture comes to life in all its beauty.

Workshop: Methods for Capturing Existing Conditions into CAD

Monday, March 23 3:15pm – 5:30pm

Room: Tidewater C

Description:

From real world to CAD! Scott Diaz and Klaus Kaiser will demonstrate technologies in traditional surveying, photogrammetry and laser scanning. Attendees will realize the benefit of capturing and organizing highly accurate data on-site within the familiar CAD environment. These efficient and budget-friendly solutions are utilized daily by preservationists and archaeologists, as well as a number of other industries involved in capturing existing conditions. Anyone with exposure to or interest in on-site data capture and documentation is welcome, as well as those with experience with AutoCAD.

Workshop: Intrasis

Tuesday, March 24 3:15pm – 4:15pm

Room: Tidewater A

Description:

During this workshop you will learn the basic concept of Intrasis, intrasite documentation system. The system is created to make digital documentation more efficient and user-friendly. We will show you how archaeological data is transported through the system, from the archaeological site to analysis.
